Why reduce pesticide

**Y**ang Kang microorganism organic fertilizer is a kind of advanced and environmental protection agricultural fertilizer.

It is used universally in the West and 80% companies in the U.S.A. have introduced and improved it to turn out the microorganism organic fertilizer suitable to the situation of America.

Our products have already attained the Domestic Extending Certification and the international approbatory "Green Food Material Cognizance Recommending Production" certification. It needs low investment. Invest more, and the benefits and rewards will be more.

**A**fter years' efforts, the Green Group has already come into the big market of the Malaysia's agriculture.

For China, the time comes for them to develop quickly so that the manufacturer has planned that in the next 5 years, they will build 15 - 20 "Yang Kang" solid fertilizer factories by the way of cooperation or joint venture etc. Thus, we cover mostly the agriculture provinces in their our country as well as for the oversea market.

A production's distribution was formed and information network was also established which circulate well, escalate the market appropriation and explores new types of biological fertilizer, biological insecticide or pesticide continually.

We are certainly to develop the Green Group into a special agriculture group which turns out and explores fertilizer and sells good types of high quality crops. We sincerely wish for your affiliating to advance the construction of the modernization of agriculture with us.
