Why reduce pesticide

The twenty-first century will be the biological century. Organic fertilizers are the future of agriculture. Yang Kang organic fertilizer has emerged to meet the challenge. It plays a unique role in preventing soil hardening without causing any harmful ecological effects comparing to the other chemical fertilizers. It increases the production yield and improves the quality of various agricultural products.

Yang Kang Organic Fertilizer is an enriched aqueous solution of organic fertilizer. By products of agriculture and fisheries are fermented using special microbes, resolved, and then enriched. It promotes the synthesis and activation of enzymes within plants.

Photosynthesis is improved and nutrient uptake is accelerated. This leads to greater yield, higher quality and earlier crop maturity.

The manufacturer of Yang Kang Organic Fertilizer is among the very few companies in the world capable of producing active microbial fertilizer. The entire production facility, bacteria cultivation equipment and the main raw materials are imported from the USA. This product meets American Standards of Quality.

It is proved that Yang Kang Organic Fertilizer is an up-to-date, high tech, trans-century fertilizer with a bright future. It will definitely bring a brighter future to the world of agriculture.

It has the feature of innocuous in the using process, so you can get the increased production, improved quality, shortened periods of up-growth and strengthen ability to resist calamities and also it has a distinct function to hold back the in duration.

After trial and error, argumentation, application of the agro-science departments of different areas all over the country, these products have been proved to be very effective, economical and applied.

We will push the modernization course of the agricultural with our solid technology strength, scientific running system, advanced marker system and high-qualified working group.
