Why reduce pesticide

Liquid Fertilizer

Yang Kang Microorganism Organic Liquid Fertilizer is a kind of water-solubility fertilizer.

It can be fully absorbed and used by the leaves within 2 hours after being sprayed. In 7 days, you can see the elementary effect and you can get an obvious effect after spraying for 2 times. The more times you spray, the more you can get the benefits.

The scientific experiments prove: All the nutrition's which can be absorbed by the roots of the plants also can be absorbed by the leaves and use liquid to spray the exterior of the leaves can strengthen plants' functions to absorb nutrition, produce the nutrition's needed by plants and absorb all kinds of nutrition's contained in the soil again.

Yang Kang microorganism organic fertilizer has the following functions and principles:-

1. It will have biological and chemical function with the plants, produces a series of enzyme and increase the intensity of photosynthesis of the crops.
2. Join directly in the metabolizing of the plants, fasten the speed of photosynthesis ,and improve the rate of using the energy and nutrition.
3. Stimulate the growth of the roots by benefiting epiphytes, form a root of epiphyte, enlarge the area of absorbing and fasten the speed of absorbing and using.
4. Photosynthesis has a double apex curve in the early morning and in the late afternoon. At noon, a phenomenon of "noon break" occurs. This phenomenon is caused by the supply of water and carbon dioxide and the result of photosynthesis. Therein to, the amylaceous' decomposing and transiting is an important factor.

Using Yang Kang organic fertilizer, the leading organism in the plants will be more developed and the complex amyllum will be carried away in time so that avoid or lessen the phenomenon of "noon break".

5. The growth hormone caused by the ferment of the microorganism can accelerate growth and bring forward harvest. Some microorganisms have the function of preventing and curing more than 500 kinds of pests to some different extents.
6. It contains azotes, phosphor, kalium and multi-microelements so that it can form enzymes and vitamins, catalyze metabolism, decrease the harm of the pests and diseases and improve the quality and quantity of the crops.

SAFETY

The ingredients in Yang Kang Organic fertilizer are materials and extracts derived from natural sources.

Yang Kang Organic Fertilizer is environmentally safe, is not harmful to animals, plants and humans and does not contain chemicals or animal byproducts of any kind.
